

Microalbuminuria Testing Kits

Product (Manufacturer)	Features
AccuBase μ Alb (Diabetes Technologies, Inc.)	Easy-to-use, accurate, mail-in urinary microalbumin screening test kit for early detection of kidney disease, which is commonly associated with diabetes and/or hypertension. Three-minute urine dip test with positive patient ID, HIPPA compliant. Specimens are mailed directly to a CLIA, CAP lab for analysis and reporting. Each lab report contains recommendations for testing as well as confounding factors that can affect the validity of the test. Test results can be mailed, faxed, e-mailed, or posted on the company's confidential website. For more information, visit www.diabetestechologies.com .
Appraise Microalbumin Diabetes Monitoring System (Matria Laboratories, Inc.)	Test kit enables patients to self-collect a spot urine specimen in the privacy and convenience of their own home. Provides patients and physicians with an early assessment of kidney damage, a common complication associated with diabetes. Test results are reported within 24 hours of receipt of the specimen and are sent by mail, fax, or electronically. Matria Laboratories is a CLIA-licensed laboratory and a Medicare provider. May be purchased directly or obtained through a physician and is available in all states. For more information, go to www.matria.com .
KidneyScreen At Home (FlexSite Diagnostics, Inc.)	Sample collection kit for mail-in microalbumin testing. Proprietary urine collection paddle allows sample to be mailed in a dried state to FlexSite's CLIA-licensed laboratory. Results reported as microalbumin/creatinine ratio and sent to patient and authorizing physician by mail, fax, or electronically. FDA-approved for over-the-counter sales. For more information, go to www.flexsite.com .
